

Quick Change TLV Prism Poles

SECO PN: 5507

These poles are designed to be compatible with all targets, prisms, and GPS antennas. By using the correct SECO #2090-XX adapter to achieve a target height of 150 mm, any of the poles in the Quick Change™ series can be used for GPS, robotic or total station surveys.

The 'Quick Change' pole system features:

- SECO TLV™ locking (TLV™ has 40-minute vial built in)
- Aluminum or carbon fiber outer pole (see below)
- Metric or dual graduation inner pole (see below)
- Available with or without locking pin (see below)
- Poles with outer GT (tenths) or GM (metric) graduations are also available, see your SECO dealer for details.

This pole system is simple to use. To determine correct adapter, subtract 150 mm from your target height to find correct adapter length.
